

Secure Endpoints For Government

ISTONISH

Secure, worry-free management of your computers

Istonish provides, manages, and supports your endpoints with amazing people, tools, and technology. From the setup of the device to the fully remote management, the skills of our team range from Virtual CIO to engineers, remote and onsite support, all with public-sector specific credentials.

Program Benefits

Enterprise Setup

- Project management coordination throughout setup of secure endpoints
- Laptop and tool set up, including provisioning, imaging, and technical support to ensure successful installation
- Documentation of knowledge articles for responding to technical issues

Support, Endpoint Management, & Monitoring

- Remote (phone based) technical support from CJIS cleared personnel is available Monday-Fridays 7AM until 6PM
- Hot-swap laptops available as needed for issues unable to be resolved remotely
- Asset management ensures equipment and software inventories remain current
- Monitoring of end points for abnormal or out of the ordinary behavior indicated by, specifically CPU, memory, and disk activity

Cybersecurity & Insurance Compliance

- Multi-Factor Authentication (MFA) for secure login and access to Virtual Private Network (VPN) connections and cloud applications like Microsoft O365 or Google Workspace
- Endpoint Detection and Response (advanced antivirus and malware protection)
- Drive encryption
- Remote operating system and application patching of end points to ensure that the most current and secure versions of software are installed
- Monthly end user security training
- Password policies confirm the use of robust passwords that are changed regularly
